

We would now be looking at measurement in Sunflower class. Please find below some maths activities linked to measurement. In task two, question four it states to measure something in the classroom which obviously they can't do, so please choose an object around your house or garden to complete this task instead.

Use these sheets/questions as a guide. Do not feel like you have to complete every activity sheet and again these are just some ideas for you to dip in and out of. Measurement is a very practical element of Maths so please do not feel that you have to record everything that you do.
