

Date _____

Name _____

Identifying and describing parts of a plants

Can you select the correct words to label the sunflower?

Roots • Leaves • Seeds • Stem • Flower • Soil

Match the correct description to each part of the plant.

Uses sunlight to make food.

Takes nutrients and water from the soil and supports the plant to stay in the ground.

Anchors roots into the ground and provides water and nutrients.

Supports the leaves and flowers to stay upright and transports nutrients.

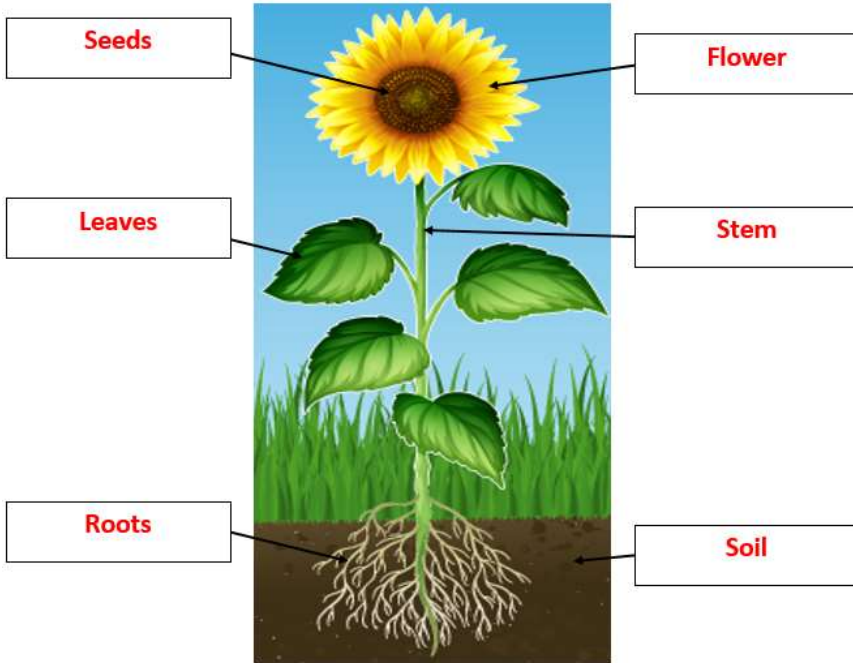

Attracts birds and insects which helps to disperse seeds.

Makes new plants when these fall into soil.

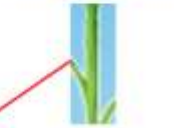

In some questions, alternative answers maybe acceptable. The likeliest answers are given below. If questions have more than one answer, teachers should use their own judgement when marking.

Labelling sunflower:

Matching descriptions:

<p>Uses sunlight to make food.</p>	
<p>Takes nutrients and water from the soil and supports the plant to stay in the ground.</p>	
<p>Anchors roots into the ground and provides water and nutrients.</p>	
<p>Supports the leaves and flowers to stay upright and transports nutrients.</p>	
<p>Attracts birds and insects which helps to disperse seeds.</p>	
<p>Makes new plants when these fall into soil.</p>	

Note: The connections in the image are: Sunlight to food (Leaf), Nutrients/Water (Roots), Anchors roots (Stem), Supports leaves/flowers (Stem), Attracts birds/insects (Flower), and Makes new plants (Seeds).
