

Play it!

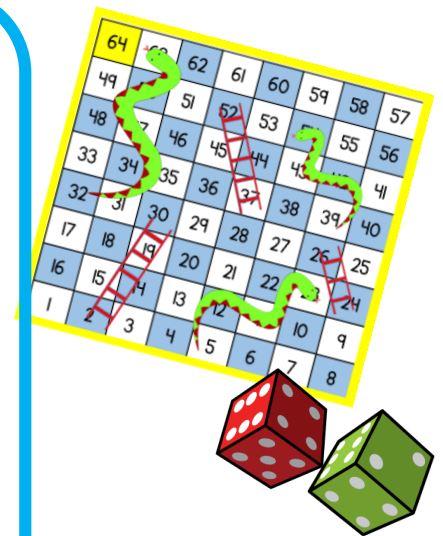

#MathsEveryoneCanAtHome

Board games provide great opportunities for maths: counting, finding totals, counting on and comparing scores.

Add a twist to snakes and ladders:

1. Use 3 dice and choose the 2 dice you want to use after you've rolled.
2. Use 2 counters per player. Decide which counter to move after you've rolled.

How do these twists help you avoid the snakes?

You could design your own games, use chalk outside to create an outdoor board game! Don't forget to share your photos.
